Permagrout NM

PERMAGROUT NM

Non-metallic, non-shrink, flowable high strength grout.

DESCRIPTION:

PERMAGROUT NM is a non-flowable, controlled expansion, high strength grouting compound.

PERMAGROUT NM's expansion process is produced by a chemical reaction that results in a predetermined expansion. This controlled expansion continues for a period after hardening to compensate for shrinkage stresses that occur during drying. **PERMAGROUT NM** contains no gas forming agents or metallic material that would lead to staining or excess deterioration.
