Petri-Flor

PETRI-FLOR

Chemically reactive hardener and dustproofer for concrete.

DESCRIPTION:

PETRI-FLOR is a clear, colorless solution of chemically active zinc and magnesium silicofluorides with a special wetting agent to change the surface tension of the water, thus assuring deep down penetration of the concrete surface.

When flooded over a concrete floor or wall area, **PETRI-FLOR** penetrated deeply into the pores of the concrete where a chemical reaction takes place. The free time in the cement combines with the **PETRI-FLOR** chemicals to form new binding materials and harder compounds.

ADVANTAGES:

? Increased resistance to chemical at chemical attack.

? Dust free floor and walls.

? Greater resistance to water, grease, or oil penetration.

? Neutralized base which requires no acid treatment before applying paint or resilient flooring.
