Permacrete 10-44

PERMACRETE 10-44

Rapid hardening, high strength repair compound for concrete.

DESCRIPTION:

PERMACRETE 10-44 is a unique multi-use repair material with a non-critical mix ratio. This feature gives **PERMACRETE 10-44** the ability to be mixed in a trowelable, flowable, or pourable consistency simply by varying the amount of **PERMACRETE 10-44** powder added to the **PERMACRETE 10-44** resin. Placement in a wide range of concrete repairs is made easier. Resurfacing, pot hole repairs and crack filling can be accomplished in less time than conventional systems and are open for use typically in 30 minutes. **PERMACRETE 10-44** is not moisture sensitive and can be used on a damp surface. **PERMACRETE 10-44** has the ability to cure in low temperature applications. **PERMACRETE 10-44** is corrosion, abrasion, and chemically resistant with compressive, flexural, tensile and bond strength that far exceed concrete. **PERMACRETE 10-44** has "built in" flexibility and excellent freeze/thaw resistance and weathering resistance.

PERMACRETE 10-44 can be used to eliminate static shock in specialty applications.
