FP-300

P-300

Acrylic polymer enhanced concrete resurfacing and repair compound for repairs 1/2 inch thick or less.

DESCRIPTION:

FP-300 is a two component, high strength compound deigned for leveling, resurfacing or patching concrete surfaces. **FP-300** is supplied in pre-measured units consisting of **FP-300 liquid and FP-300 powder**. When the powder mix is added to the liquid a high strength, highly workable repair compound is formed. **FP-300's liquid component** ensures enhanced flexural, tensile, structural, and bond strengths. **FP-300** is self curing and waterproof which allows exterior or interior applications. **FP-300 may be used to** resurface large areas as well as cracks or depressions.
