Hydroplug-5Min

HYDROPLUG

Rapid hardening specialty cement to stop running water available in a variety of set times.

DESCRIPTION:

HYDROPLUG is an advanced formula powder blend which produces instant set combined with accelerated strength to prevent hydrostatic water flow. **HYDROPLUG** insures watertight seals not achievable with regular cement mixes. **HYDROPLUG** is used to stop running water or seepage through cracks in concrete, concrete sewer pipes, tanks, elevator pits, manholes or any related areas. **HYDROPLUG** provides water tight seals at joints in sewer lines, manhole, lateral line or house connections. **HYDROPLUG** is also useful in concrete conduit, mines, wells, tunnels and tanks. **HYDROPLUG** can be used above or below grade, can patch faults in precast or cast in place structures as a cove material between concrete walls and floors or as a grout for anchor bolts.

HYDROPLUG performs well under a variety of uses.

ADVANTAGES:

? Available in 55 second, 5 minute, and 15 minute set times

? Fully controlled set

? Resistant to chemical attack

? Contains no calcium chloride, gypsum, plaster

? Highly freeze/thaw resistant

? Mixes only with water - no additional additives

? Instant strength gain
