Tuffseal

TUFFSEAL:

Cure, seal, hardener and dustproofer for concrete floors.

DESCRIPTION:

TUFFSEAL is a one step method to cure, dustproof and finish new or old concrete floors. As a curing method, **TUFFSEAL** acts as a transparent membrane with high water retention. One application of **TUFFSEAL** results in a hydrated, maximum strength slab. This is accomplished by minimizing water loss through the surface resulting in a thoroughly hydrated concrete. The need for plastic sheeting, burlap or other curing methods is eliminated. **TUFFSEAL** penetrates the concrete and forms a seal that produces a hard, smooth, dustproof film. **TUFFSEAL** may be applied over old concrete to eliminate dusting and will not interfere with most floor adhesives.
